

# DaaS - Device as a Service

## Reinventing how technology works for you

With the consumerization of IT, and more of the millennial generation joining the workforce, the business of IT is becoming more and more complex. You have more devices per user, more multi-vendor environments to manage, more services and hardware, and more issues from an aging device fleet. There are more invoices and contracts, more budget constraints—and the list continues. At PDS, we believe deploying and managing devices should be as simple as ordering off a menu. And now it can be through complete device life-cycle management, in a single contract, on a pay-per-use basis.

### Overview

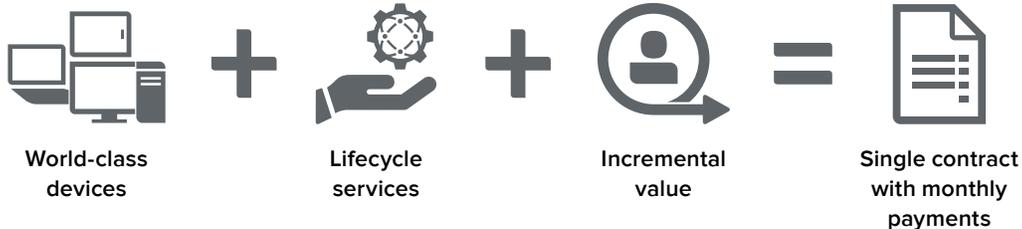

Device as a Service combines a comprehensive suite of award-winning hardware with high-quality PDS Services. It allows you to proactively and predictively manage your multi-vendor PC environment.

PDS Device as a Service spans every stage of the asset management life-cycle, and can be customized to meet your exact needs—so you don't pay any more than is needed. Our services benefit from PDS' expertise, and high customer satisfaction to provide consistency and better serve the needs of your internal teams. The result? Delighted users and management freedom.

### How it works

By combining hardware and services into a single contract with one monthly payment, Device as a Service can help improve your cash flow, preserve capital to invest in other IT priorities, and deliver a predictable and consistent IT budget. Printer hardware and services can also be added for even greater economies of scale.

Incremental value such as an Account Delivery Manager, reporting and analytics, and combined PC and Print services help to ensure you and your users are satisfied with all aspects of the service delivery.

### What is Daas?

DaaS enhances device acquisition, improves device management, and optimizes device usage—while allowing IT to take a more strategic role.

#### Benefits:

- À la carte solution
- A single contract on a per-month basis
- A great end-to-end user experience

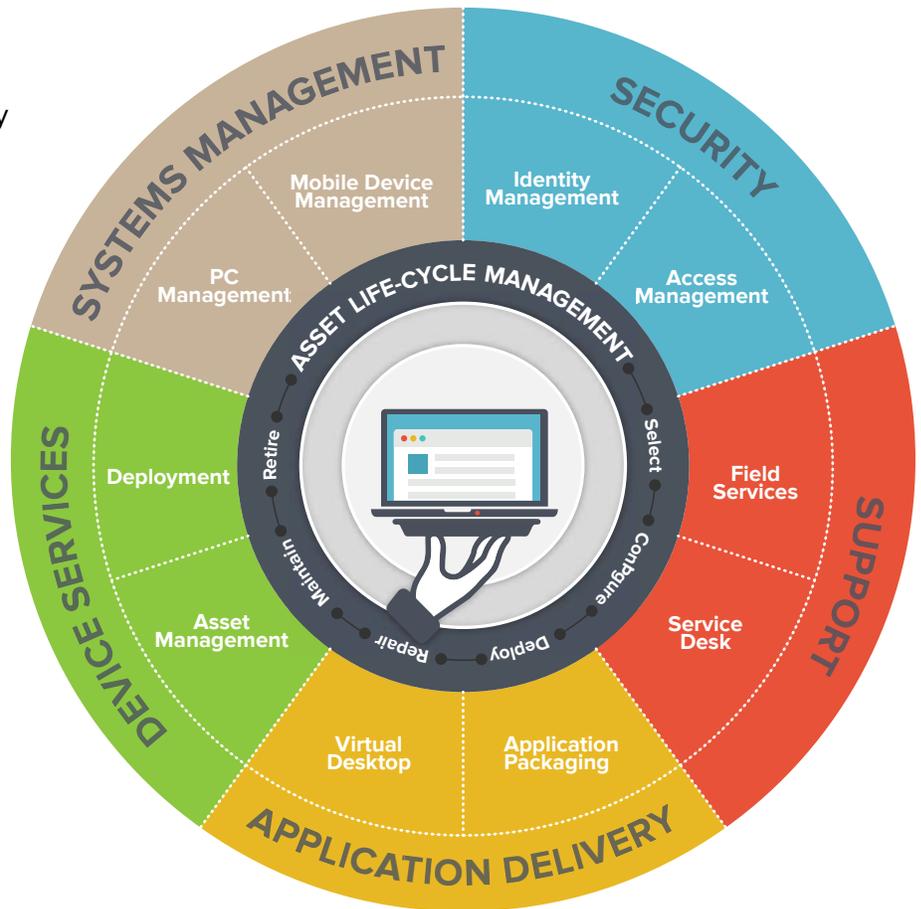

# Simplify your IT

Forget the complexity and let PDS simplify your device lifecycle management. PDS Device as a Service offers a single solution—one contract, one monthly payment, and one supplier—for your device needs across the entire lifecycle, and all the financial benefits that come with that simplicity. Whatever your device needs, PDS can handle them—so you don't have to.

### Deploying DaaS will help you:

- Get business-ready systems tailored to your needs
- Gain peace of mind and the ability to focus on your IT priorities
- Leverage economies of scale and consistency
- Access an award-winning portfolio of hardware and world-class services
- Simplify your procurement, billing, and IT budget
- Reduce your capital outlay and improve your cash flow

## Why DaaS is in demand

Expectations for IT and the way we do business is changing.

### Strategically trusted

Leverage PDS expertise and scale, and bring greater value to your business.

### End-of-life safe

Get ahead of technology with a solution that plans ahead for end of life.

### Financial intelligence

Manage your total cost of ownership with contractual precision.

### Satisfaction driven

Close service gaps and deliver PDS caliber service across the device lifecycle.

### Monitored for security

Keep your devices monitored, secured and policy-compliant at all times.

### Consistency

Have a national partner and a single point of accountability.

### Lifecycle productivity

Make users happy with devices that are well-tuned and productive.

### Dashboard insights

Gain analytical insight on your fleet's inventory, location and condition.
