

Office 365

Your workforce excels in a fast pace environment, and your staff expects technology that keeps them ahead of the competition: agile, reliable, and responsive to changing situations.

They need to access their applications and data, at anytime and anywhere, allowing real-time collaboration. To help your workforce thrive, your business depends on IT that is flexible, scalable and always connected.

To meet these demands, you might be planning to move your IT and email to the cloud. If so, you're in good company. More than 50,000 businesses become Office 365 users every month. In fact, nearly 78% of enterprises are using or plan to use Office 365, Microsoft's platform to deliver its next generation communication and collaboration tools.

PDS is Your Cloud-migration Partner

We can help you implement and maximize Office 365. We are the experts in the planning, designing and deployment processes. We'll dive into your environment, dealing with everything from the nuts and bolts of licensing to recommending solutions for your current environment and future, strategic goals. Then we'll map your Office 365 setup and conduct your email service migration. Once live, we'll stay with you through our on-going services: We provide desktop and device management support and you also have access to our 24/7 help desk.

From implementation through daily operations, PDS is your partner in helping you maximize the productivity gains and cost saving features of taking your business to the cloud through Office 365.

Office 365 Advantages

Office 365 is the cloud-enabled version of the familiar Microsoft Office Suite you rely on plus productivity-enhancing email and collaboration features. Instead of relying on costly in-house infrastructure that your staff has to manage and troubleshoot, the cloud offers on-demand collaboration services to your entire organization.

Works for mobile, flexible businesses.

You can install O365 on multiple devices – PCs, Macs, Android tablets and phones and iPad and iPhones. Office 365 works across devices letting you access your data however you prefer, whenever you need it and virtually everywhere you are.

Facilitates collaboration.

Users can work together in real time, sharing, updating, and chatting with colleagues while editing documents on any device that is connected to the Internet.

Eliminates downtime.

Your employees can't access their files if the LAN is down, but O365 cloud services can offer users 99.9% uptime, guaranteed. Likewise, say goodbye to using backup tapes to guard against lost or corrupted files.

Frees up your IT staff to focus on higher value tasks.

O365 is user-friendly. You won't need "the IT guy" to run analytics or set-up computer conferencing. And O365 has low upkeep. By moving your Exchange service to the cloud, you off-load server management and eliminate the hassle of upgrades and patches, which are automatic with Office 365.
