

PDS Service Philosophy

We Provide

Helping Hands and Consultative Eyes

We Focus

on Consulting, Security, Design, Implementation, and Co-Managed Services

We Are

Holistic, Business Aligned, and Risk Aware

We Believe

in Consultative Based Conversation Over Product or Service based Conversations

We Have

Industry Leading Experts across the Enterprise IT Stack

Our Partners

Are Vast in number and deep in relationship quality

The PDS Difference

We offer a boutique approach at a large scale. We don't offer cookie cutter engagements

The breadth services and capabilities across the entire IT stack. PDS delivers consulting, design, procurement, configuration, life cycle, implementation, repair, project management, staffing, engineering, administration, and support capabilities.

Our deep and vast partner relationships

Our real-life dedication to the goal of helping our clients deliver upon their business strategies

PDS IT Vulnerability Assessment Summary

Essentials

Premier

Choose 1

- Risk Management and Governance
- Monitor, Alert, and Incident Response
- Information Classification and Protection
- Asset and Configuration Management
- Identity & Access Management
- Network Security
- System Security
- Database Security
- Application Security
- Cloud Security
- Security Training and Awareness

A holistic Vulnerability Assessment including all the *Essentials* level workshops.

Our Vulnerability Assessment will help identify, evaluate, and prioritize vulnerabilities in your organization. As one pillar of the PDS security model it is an essential tool for identifying real actions that will produce meaningful results.

Includes professional service hours to help address identified vulnerabilities.

Interested in learning more about the PDS Best Practice Security Model, our suite of security workshops, and how PDS can turn security reports into real world results? Contact Derek Blakeslee directly @ 262.246.2691 or email dblakeslee@pdsit.net

Vulnerability Assessment Explained

The PDS *Essentials* Vulnerability Assessments are designed to arm you with the needed data to have informed and well directed conversations. These conversations help your organization create a list of “Must Do”, “Should Do”, “Could Do”, and “Won’t Do” items forming the bedrock of a security posture improvement plan. This is an excellent place to start your security journey and begin gaining insights into what that means for your organization. All our *Essentials* Vulnerability assessments deliver a easy to understand report, recommendations, and a review session with our experts.

Our *Premier* level Vulnerability Assessment is a holistic and business aligned engagement that consists of all our *Essentials* level assessments plus more. This engagement will provide your organization with a complete picture of the vulnerabilities present in your environment along with a PDS team of experts ready to help you address them.

Vulnerability assessments are an excellent tool for identifying actional improvement areas, but they are not the entire security picture. PDS has developed a Best Practice Security Model which we use to help organizations build a 360 degree security strategy that makes sense for their organization. PDS will embark on a multi-year journey with you to embed security into the foundation of all you do. Our goal is to help you transform security from a project into a way of operating.
